

ROOM BOOKING SYSTEM

Aim

To develop a simple Room Booking System using Zoho Creator to demonstrate the Software as a Service (SaaS) model, allowing users to reserve conference or meeting rooms through a cloud-based application.

Procedure

1. Log in to Zoho Creator and create a new application named Room Booking System.
2. Create a form and add the required fields such as Staff Details, Room Selection, Booking Date and Time, Department, and Meeting Description.
3. Configure field properties and create basic workflows to validate booking details and avoid scheduling conflicts.
4. Save the form, enter sample booking records, and verify the generated reports.
5. Publish the application to demonstrate cloud-based access using the SaaS model.
